

How to Measure for a Stealth Belt

3 Measurements are needed to begin making your Custom Stealth Belt:

1. Stoma Location: Right or Left?

This is a Right Sided Flange

2. Measurement around your body at the level of the Stoma

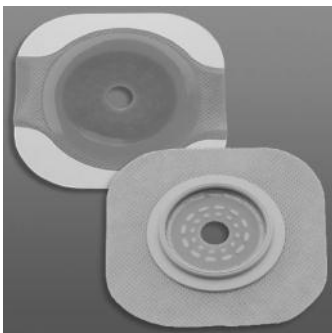

Above the Stoma measures as a 33"

Below the Stoma measures as a 35"

This person would need a 34" Stealth Belt

3. Determine your Flange Diameter

Some popular sizes are 1 3/4" and 2 1/4"

Use the model # of your device to verify your flange measurement online
